

The Biotechnology Company Enantis situated in Brno, Czech Republic is seeking a highly motivated

Molecular Biologist

for a full-time employment

Job description:

- Work independently, design and execute experiments in molecular biology and protein engineering
- Construct mutant proteins optimized for industrial applications
- Perform protein expression, purification and analytical characterization

We offer:

- Working in a highly collaborative agile team with members representing diverse interests and qualifications from biochemistry, through microbiology and molecular biology to bioinformatics and molecular modelling
- Engagement into ambitious projects with the aim to develop new biotechnologies
- Working within an inspiring and challenging environment using state-of-the-art technologies
- Competitive salary and benefits package
- Opportunities for further education and training

Requirements:

- Mgr. (M.Sc.), PhD in Molecular Biology, Biochemistry, Genetics, Genomics, or related field.
- At least 2 years molecular biology lab experience
- Experience with molecular biology (cloning, site directed mutagenesis, techniques of directed evolution, preparation of mutant libraries, library screening assays) and protein biochemistry (expression, purification, characterisation)
- Excellent English language skills
- The ability to develop and apply new concepts, a creative approach to problem-solving and a flexible attitude towards work are also essential

Applications including a motivation letter and CV should be sent by **15th January 2018** by e-mail to polednakova@enantis.com
